To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 5 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Welker et al (US 5,988,259).

Welker et al disclose the method for determining a controlling the material flow of continuous cast slabs in transport and processing paths between the continuous casting installation and a rolling mill by monitoring and optimizing the temperature on the transport and processing paths comprising the steps of determine the temperature of the liquid phase at the mold exit including temperature dependent material values comprising at least one of density, specific heat, or thermal conductivity, during the flow in the transport path, measuring a surface temperature of the slab over time and determine an amount of heat and a temperature profile of the temperature profile of the continuous slab over time by calculating the convective mixing of the amount of heat in the slab, wherein calculating using a mathematical model using one of a two-dimensional finite element, and controlling the flow of the slab in the transport and processing path using measured surface temperature of the slab and temperature profile in previous step as input to the slab monitoring system (col. 3, lines 8-15, col. 4, line 5- col. 5, line 15, col. 5, lines 39-45).

#### ***Response to Arguments***
